Until the building is realized, we are all merely bought into its artistic representations. A successful rendered image can turn the table of the entire game and vice versa.

This is the very same skillset that is required for the branding and selling of any product or service you see everyday advertisement which often uses the means of photography. Their success is no accident but a careful engineering behind the psychology of buyers. This applies equally to the Architecture.

Interest and artistic sense in the built environment. Some experience in Photography, 3D modelling, rendering engine and Photoshop are preferred but not necessary.
